## Thames River Capital to Use Charles River IMS

*Excerpt from The Trade highlighting Thames River Capital's selection of the Charles River Investment Management System*

London-based hedge fund and asset manager Thames River Capital Group has chosen the Charles River Investment Management System (Charles River IMS) to automate pre-and post-trade compliance for all asset classes across its asset management operations.

Thames River Capital will use the Charles River Anywhere module to securely view and control critical Charles River IMS information from any web-enabled device.

Charles River IMS is a front- and middle-office software suite for all security types that includes Charles River Manager for portfolio management and modeling; Charles River Trader for order management and electronic trading; Charles River Compliance for real-time pre-trade and end-of-day compliance; and Charles River Post-Trade for the centralized management of trade matching, confirmation, and settlement workflow. The system incorporates global real-time electronic trading via FIX through the Charles River Network.
